

SERIAL / LOT TRACKING

Simplify the task of tracking serial numbers and/or lot numbers and maintain the data required by customers and regulatory agencies.

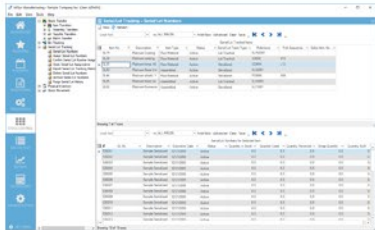

sage 50 US

sage 50 CA

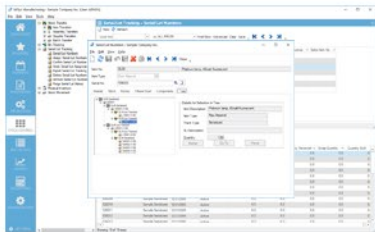

sage 300

sage Intacct

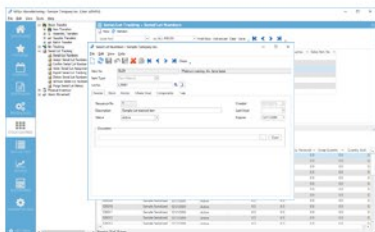

Seamless integration with the most popular accounting software

Assignments done by lists
– no retyping!

Graphical, multilevel traceability
with easy drill down

Manage each serial/lot number
with its own specific file

Manufacturers needing to track serial or lot numbers, not just for finished goods but throughout the entire purchasing and production process, will find that the optional Serial/Lot Tracking module allows them to comply with strict regulatory agency requirements, including FDA and FAA.

IDEAL FOR MANUFACTURERS OF:

- Food Products
- Medical Devices
- Pharmaceuticals
- Defense and Aerospace
- Automotive

SATISFIES THE REGULATORY REQUIREMENTS OF:

- US Food and Drug Administration
- US Federal Aviation Administration
- ISO 9000

FUNCTIONALITY

- Set up the system to be able to track by item, serial number or lot number.
- Establish and assign sequential serial and lot numbers.
- Adjust numbers that have been previously assigned.
- Generate reports by stock status, history, where used, component lists, manufacturing orders.
- Transfer serial numbers to finished goods in accounting software (where available).
- Transfer serial numbers to a sales order in accounting software (where available).
- Transfer lot numbers to finished goods in accounting software (where available).
- Identify the assembly, subassembly or MO in which the tracked item was used.
- Identify the quantities of a serial/lot tracked remaining in stock.
