

BIN TRACKING

Track inventory items by the container(s).

Seamless integration with the most popular accounting software

Manage inventory in multiple sub-locations within each warehouse

See the location of inventory at a glance

Manage and update bin quantities as part of every transaction

If your business requires that you keep your raw materials, sub-assemblies, or finished goods inventory in specific containers (bins, bales, bolts, etc.), the optional Bin Tracking module allows you to maintain a unique inventory sub-location for every item or assembly.

FUNCTIONALITY

- Keep raw materials, sub-assemblies or finished goods inventory in specific containers (Bins).
- Assign specific Bin locations for specific items.
- Pre-Assign Bin locations or use the Deferred or Automatic Bin Assignment modes.
- Record all bin-related transactions in the MISys Master Transaction Log.
- Track the quantity of inventory items in each container.
- Track bin locations through Purchase Orders, MO's and other functions within MISys.
- Print bar-coded Bin labels (the Bar Coding module is required).

NOTE: Although MISys Basic Manufacturing supports an unlimited number of warehouse locations, Bin Tracking allows manufacturers to track the same inventory item at several physical locations within a common warehouse.
